

## Muck Boots Care Guide 2023

Your New Muck Boots Are Constructed With  
High-Grade Materials And Natural Rubber.

It Is Important To Follow Our Care Guide To Help  
Prolong The Life Of Your Boots.

# How To Clean & Care For Your Boots

## Step One

Preferably while your boots are still wet, brush/wipe off excess mud with a soft brush/cloth.

Remove any remaining mud with a cloth and tepid water. This also helps remove any contaminants you may have inadvertently walked through, such as chemicals or animal waste, which can damage the materials.

## Step Two

Allow your footwear to dry naturally away from artificial heat

While it might be tempting to leave your footwear by a radiator, artificial heat will affect the uppers potentially leading to cracks and crazing.

### Step Three

Nourish - Feeding your boot uppers will help keep them supple, prolonging their life and minimizing the risk of cracks and crazing.

There are many examples of rubber boot care products on the market including **Grangers Rubber Boot Care Spray**.

For leather uppers use a suitable leather care product.

Once dry, any woven/fabric upper panels can be gently brushed with a soft brush to remove any remaining mud.

## **Best Practice To Prolong The Life Of Your Muck® Boots.**

### **Putting On**

Take care pulling your boots on to ensure the boots shaft is correctly extended. Our neoprene upper can be a snug fit and not pulling the boots to their full height, or over stuffing with trouser legs can cause excessive creasing where the ankle articulates.

### **Taking Off**

Using a suitable boot jack is the preferred method of removal. There are many examples of boot jacks on the market including Muck Boots own.

Avoid using the opposite foot as a lever on the heel of the boot or a convenient step, stair or rock as this can damage the boot and can cause excessive pressure on the boot heel and sole leading to damage.

## Storage

Avoid storing your boots in direct sunlight, near to any artificial heat or in sub-zero temperatures, as this can cause the rubber to become brittle, deteriorate and crack. Preferably store your boots upright to avoid creasing or folding – some crumpled newspaper will help.

*“\*Our boots are great, and a little TLC should see them lasting and performing to the highest standards in the toughest conditions.*

*However, they are conceived as a work/walk inspired product. Particularly our tall boots are not designed for driving or horse riding unless specifically stated. Inappropriate use can shorten their effective lifespan.”*
